

White and Street International Limited

Fibre Drum End Trimming Machine WS950 Mk2

The Fibre Drum End Trimming Machine from White and Street International removes the metal rims from fibre drums. The drum body is then available for recycling, and can be flattened to a small volume for storage.

Apart from loading and unloading, normal operation is automatic - closing the door starts the cycle. By switching to 'HAND', each individual function can be operated from the control panel provided the door is shut. The rotary scissor action gives a clean, dust free cut.
