

WS999

In-Line Rotary Hot Foil Pipe Printer

All welded construction for rigidity and strength. High reliability with low maintenance. A design born of White and Street's long experience with advanced high speed cable printers.

The WS999 can be set up to operate from either right-to-left or from left-to-right.

Print repeats at 24 inch intervals. The print wheel is fitted with a 7-digit progressive numbering head and a 7-digit coding head. Die slots enable printing around the full circumference of the wheel. The print head is raised or lowered pneumatically. Wheel temperature is managed by a closed loop digital control.
